

**SALVAGUARDA**  
ABBIGLIAMENTO PROTETTIVO ITALIANO

Protective clothing is implemented to preserve from direct contact with potentially dangerous and infective substances. This kind of clothing is not only required in hospitals and laboratories, but also in the everyday life of many other professional categories, every time they face the need to be protected and safeguarded.

Salvaguarda disposable protective clothing, manufactured and distributed by Giuntini S.p.A, is produced with the support of the certified facilities.

Personal protective equipment of high quality and high resistance, an ideal balance of protection, solidity, and comfort.

## Blockchain technology as a guarantee for surgical masks supply chain

The integrated project of transparency, traceability and control of the supply chain based on the blockchain technology, aims to enhance the product, realised in Italy.

DNVGL Business Assurance Italia, worldwide leader in certification and surveillance activities, defined an Assurance System, powered by Blockchain technology, to ensure high-quality standards production, in full security and with working conditions and environmental impacts focused on sustainability.

All the inspections made will be visible to the final customer. The process is articulated through the supply chain, allowing full awareness of every step, starting from raw materials to the final product.

Thanks to the project, it is possible to connect every production batch to the raw materials used and to all the production steps.

The final customer, thanks to this process, can be aware of all the essential information concerning the product based on specific standards, with a drastic reduction of the risk of counterfeiting.

### Value

Valuing the product realised in Italy, through a supply chain controlled and managed in the highest standards and with the lowest environmental impact.

### Availability

Ensuring the availability of critical products, in the highest volumes, with no discontinuity.

### Traceability

Ensuring the traceability and the authenticity of the raw materials used through a traceability system based on Blockchain and inspections on the supply chain for every stage to the final delivery.

### Protection

Protection of the commissioner and final customers, monitoring the operators throughout the supply chain, following a specific Assurance protocol.

## Giuntini S.p.A

Giuntini is a Tuscan manufacturing enterprise, operating for over 50 years. Salvaguarda represents a dedicated business unit for health-care sector. The development of this line started with the production of surgical masks as a response to the National medical emergency. The consolidation and organization did not take a long time, and Salvaguarda became a reality in the production of Personal Protective Equipment (full body and partial body).
